

Resource Hacker 4.0 RePack

Послан Easerieveda - 03/05/2015 18:27

Viewer, retrieve, edit and add resources to Win32-application, ie in their functional orientation similar to the well-known program Restorator (appearance, by the way, too), but free ... Resource Hacker can be used for simple "pull-out" icon, music, and others, located in executable files (* .exe, * .dll, * .cpl, * .ocx) and in Win32 resource files (* .res), and, for example, to modify the interface of the program, including its translation into another language.

View. The program is able to browse the resource files: cursors, icons, BMP, GIF, AVI, JPG and PNG; can play WAV and MIDI. Resources executables Menus, Dialogs, MessageTables, StringTables, Accelerators, Delphi Forms, and VersionInfo can be viewed as decompiled scripts, and Menus and Dialogs can be seen in the form in which they are displayed in the running application.

Saving. Resources can be saved:

as the pictures (.ico, .bmp, and so on. n.);

as the script files (.rc);

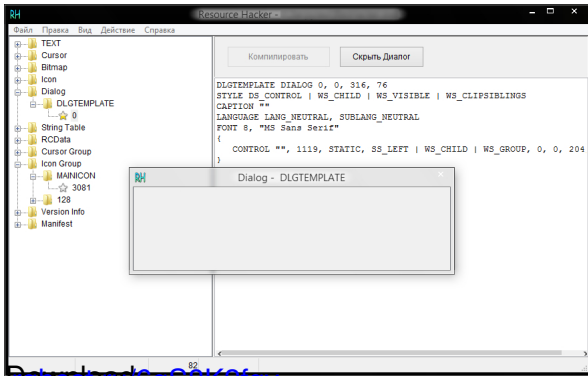

as binary resource files (.res);

untyped binary files (.bin).

Modification. Resources can be modified with a record in another file (.ico, .bmp, .res, and so on. N.) Or by an internal resource script compiler (for menus, dialogs, etc.). Dialog controls can be visually moved and / or resize them just one mouse movement.

Addendum. Resources can be added to an application by copying them from external resource files (.res).

Removal. Resource Hacker allows you to remove unused resources in the annex, which are included to many compilers. Removing unused resources can reduce the size of the original application.
